

MXI SECURITY AND MOBILESECURE PARTNER TO OFFER CENTRALLY MANAGED SECURE PORTABLE STORAGE

San Jose, CA (February 14th, 2006) – Today at the RSA Security conference, MobileSecure™ announced a partnership agreement with MXI Security. The two companies will integrate their technologies to create the first, centrally managed, portable information protection solution. The companies will integrate MobileSecure's Removable Device Manager (RDM) with MXI's secure digital storage devices. The solution will be the first to deliver advanced data protection and compliance through continuous audit and monitoring utilities, while authentication and strong encryption are tightly integrated onboard MXI devices. This offering provides organizations with an expanded capability to lock out unauthorized USB devices, while providing authorized MXI devices context based connectivity and user permission policies defined by an organizations security officer.

"MXI's customers have strongly communicated their requirement to securely manage and monitor information, while employing mobile solutions," said Lawrence Reusing, CEO, MXI Security. "The integration of our new MXP™ technologies produces a significant capability to mitigate unauthorized information disclosure or leakage; providing organizations with a real alternative to disabling USB ports."

"Until now, management of portable devices has been limited primarily to USB port control on the device that a USB device is being inserted. MobileSecure's RDM™ allows portable devices and information to be policy enforced regardless of the network they are used. MobileSecureRDM's integrated policy enforcement and mobile alert components, combined with MXI's encryption and authentication technologies, empowers CIOs and CSOs to confidently deploy compliant portable information solutions." said MobileSecure's CEO Duncan Mackay.

About MXI Security

MXI Security, a *division* of Memory Experts International, a leader in building memory-based products for Fortune 500 companies for more than a decade, provides portable security devices for professionals for whom security and privacy is critical. MXI Security's product family of USB-based portable security devices address professionals' need for highly portable digital identities and information. These devices seamlessly integrate into an organization's existing security assets at the lowest total cost of ownership.
