

What are "Trusted Users" doing with company information?

OnEdge Protective Services Data Sheet

Laptop and Data Security

Laptop security concerns every laptop owner and company whose employees use Laptops. If you or one of your employees lost a Laptop, would you know the extent of your legal exposure?

Consider the data that resides on laptops. Do these laptops contain confidential client information, personal identity files, financial plans or other sensitive and valuable information? What would happen if this data were to become public or ended up in the wrong hands?

OnEdge Protective Services is a comprehensive, highly secured and easy-to-use fully Managed Service providing you with the ability to:

1. Track a Laptop's location
2. Identify Files saved on a Laptop
3. Remotely "Lock Down" all access to a Laptop
4. Remotely "Unlock" access to a Laptop upon recovery
5. Use location history and File Audit reports as compliance and audit tools

Lost and stolen devices, such as laptops, are the leading cause of improper access to confidential and sensitive information. Financial, Regulatory and Public Relation costs suffered as a result of such improper access to confidential and sensitive information are staggering. Knowing where a missing Laptop has been, where it was last used and what information is on the device has become critical in meeting compliance and audit requirements established in HIPAA, GLBA and SOX.

OnEdge Protective Services brings together the power of mobility and assurance of security.

About MobileSecure

MobileSecure enforces compliance at the "Mobile Edge". With more than 1 billion mobile devices (PDAs, smartphones, iPods, thumb drives, Zip disks, and more) currently in the market, business users are connecting these devices to corporate PCs and networks on a daily basis.

MobileSecure brings business continuity to companies looking to both meet compliance and to continue to allow their workforce to leverage the power of mobile technologies.

FACTS:

- According to Gartner Group, 1 out of 10 Laptops are stolen every year.
- Fidelity Investments: Personal data on 196,000 retirement accounts on stolen Laptop (2006).
- Gap, Inc. : Personal data on 800,000 job applicants on stolen Laptop (9/2007).
- 49% of all data breach incident are a result of lost or stolen laptops costing organizations \$197 per record compromised. (Ponemon Institute Study 11/2007)
